Professional Summary

Backend & infrastructure engineer (Go, Rust, Python, AWS) focused on architecting reliable, highly concurrent distributed systems. Proven track record of building event-driven pipelines, low-latency API proxies, and high-throughput microservices.

Technical Skills

Languages: Python, SQL, Java, JavaScript, TypeScript, Bash, HTML/CSS, Go

Backend & APIs: Spring Boot, Node.js, Flask, Hibernate, SQLAlchemy, FastAPI, RESTful APIs, GraphQL, Microservices, Kafka, Protobuf

Cloud & DevOps: AWS (Lambda, API Gateway, EC2, S3, SQS, CloudWatch), Docker, Kubernetes, Jenkins, Git, Linux/Unix, Terraform, CI/CD Pipelines, Prometheus

Databases: PostgreSQL, MySQL, Redis, Azure SQL, MongoDB, DynamoDB

Engineering Practices: Object-Oriented Programming (OOP), System Design, Unit Testing (JUnit, PyTest, Mockito), Agile/Scrum, Data Structures & Algorithms

Experience

GenAIx — New York, NY, USA
Software Engineer — *May 2025 – Present*

- Promoted to permanent role after initial tenure, owning **backend architecture and AWS infrastructure** end-to-end.
- Engineered a **TypeScript** browser extension detecting employee AI prompts, transforming the inputs into JSON event streams across **100+ client organizations**.
- Architected an event-driven serverless ingestion pipeline using **AWS API Gateway**, **Lambda**, and **SQS**, absorbing **2,000+ QPS bursts** with immediate 202 Accepted responses to reduce **client latency by 25%**.
- Built a multi-tenant **Python NLP** scoring engine via **SQS-triggered Lambdas**, processing **200+ prompts/sec** with idempotent **PostgreSQL** writes and **S3** raw log archival at **99.9% availability**.
- Automated **CI/CD pipelines** via **GitHub webhooks** and **Jenkins**, utilizing **PyTest** and **Moto** for mocked AWS testing, raising **coverage to 85%** and cutting **release times by 40%**.
- Spearheaded **Infrastructure-as-Code (IaC)** via **Terraform** with S3 remote state tracking, slashing new environment **provisioning time from 2 days to 30 minutes**.
- Optimized AWS Lambda concurrency and auto-scaling policies using **CloudWatch** metrics, reducing overall **compute costs by 22%**.

Group Futurista — Mumbai, MH, India
Software Engineer — *May 2023 – September 2023*

- Developed a centralized **Java microservices platform** using **Spring Boot** and **Hibernate**, building resilient **RESTful APIs** that streamlined core business logic and supported **100k+ monthly active transactions**.
- Redesigned event-tracking database schemas in **PostgreSQL**, implementing multi-column indexing, query plan optimizations, and connection pooling to accelerate **query performance by 15%**.
- Built high-throughput data integration microservices between external marketing systems and internal clustered **PostgreSQL** databases, keeping **p95 API response times under 100ms**.

A1 Systems — Mumbai, MH, India
Software Engineer — *June 2021 – December 2022*

- Developed robust **Java (JDBC) backend modules** to automate batch ingestion from **Azure SQL**, processing **500GB+ of daily data** and increasing **system throughput by 30%**.
- Refactored monolithic legacy codebases into **Object-Oriented micro-services**, improving maintainability and reducing **new feature onboarding time by 20%**.
- Instituted foundational unit testing frameworks for the newly refactored micro-modules using **JUnit** and **Mockito**, fostering a culture of test-driven development (TDD) within the intern team.

Projects

Mosaic — Distributed Key-Value Store | *Go, gRPC, Protobuf, Raft, Chaos Engineering*

- Built a **5-node Raft cluster** in **Go** (leader election, log replication, dynamic membership) sustaining **12,000 read/write ops/sec** at **p99 under 40ms**; bounded crash-recovery via a **write-ahead log (WAL)** and 10k-entry snapshot compaction.
- Exposed the cluster over a **gRPC/Protobuf API** with linearizable reads via **Raft ReadIndex**, built a fault-injection test harness (partition, leader-crash, message-reorder) that verified **zero stale reads** and no log divergence on recovery.

SentinelLLM | *Python, Redis, Docker, FastAPI, Prometheus*

- Engineered an **OpenAI-compatible Python** proxy gateway supporting tenant-based API authentication, real-time security guardrails, and **low-latency streamed response** forwarding.
- Implemented **Redis-backed sliding-window rate limits**, dynamic token-budget controls, and tenant-scoped exact/semantic caching, reducing redundant **upstream LLM calls by 35%**.
- Integrated **asynchronous telemetry** and **Prometheus metrics** tracking token consumption and p99 latency, containerized the full stack with **Docker Compose** for seamless local orchestration.

Education

Arizona State University — January 2024 – December 2025
Master of Science in Information Technology — *GPA: 4.0/4.0*

Mumbai University — August 2019 – May 2023
Bachelor of Engineering in Computer Engineering — *GPA:* 3.87/4.0
